

INSERT**DELETE****UPDATE****INSERT**

INSERT INTO table-name (col1, col2, col3) ^{optional to specify col. SQL will assume all columns are in consideration.}

VALUES (val1, val2, val3),

(val1, val2, val3) ← inserting multiple data is possible.

!!Number of columns and values must match!! (RULE)INSERT Using SELECTTake data from one table and insert that to another table.Syntax:

```

INSERT INTO [target-table]
SELECT
  col1,
  col2,
  col3,
  NULL,
  [default-value]
FROM [source-table]
WHERE ....

```

Just like a SELECT Query.

UPDATE

Change content of the existing row.

```

UPDATE [table-name]
SET   col1 = value1,
      col2 = value2
WHERE [condition]

```

Conditional statements

AND, OR, NOT

To address NULL values in WHERE**WHERE [col-name] IS NULL****DELETE**

- remove rows from table.

QEx:

DELETE FROM [table-name]

WHERE <condition> → **Very important**

Delete all data

DELETE FROM [table-name]

[This deletes all the data but keeps the table]

TRUNCATE — DELETE but without logging or anything.

Syntax: TRUNCATE TABLE [table-name]

Caution:

Always check data using
SELECT before manipulating
data.
