

Comparison Operator

Compare 2 things →

Syntax: Expression operator Expression

Compare:

1. column to column
2. column to value
3. Function of column to value
4. Expression to value
5. Subquery to value/column (Advanced stuff)

Example: SELECT _____ FROM _____ WHERE country = 'USA' ;

Operators:

= → equal operator.

<> != → not equal operator

> → greater than operator

>= → greater than or equal operator

< → Less than operator

$\leq$ → Less than or equal operator.

Logical Operator

AND

All conditions must be true.

OR

Any condition needs to be true. One or both.

NOT

Condition must be false.

Syntax: WHERE NOT **OP**

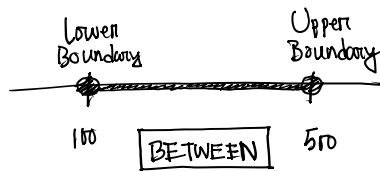

Range Operator

BETWEEN

value must be in the specified range.

- need to specify boundaries

- boundaries are inclusive

Syntax: WHERE [column] BETWEEN [upper] AND [Lower]

Alternative

WHERE [column] $\geq$ [Lower] AND [column] $\leq$ [Upper]

I always had the desire to acquire useful information.

I just had to update my definition of 'useful'.

Membership Operator

IN

IN

value is "in" the list provided in the Query

Syntax: WHERE column IN (value1, value2 ...)

NOT IN

Give rows where values of the column are not in the provide list.

Syntax: WHERE column NOT IN (value1, value2)

Search operator

Like

Search for pattern in text.

Pattern

% → anything / any character

_ → one character (only one)

Ex: M%

→ First character is 'M'

→ Next character can be anything,
can be any amount of characters.

Syntax: WHERE column LIKE <pattern> [WHERE p-name LIKE 'Tah%']
